6. Main User Interface

Now that you have installed your Iridium AccessPoint Hotspot, you will need to configure your Wi-Fi hotspot. Go to the Settings Tab on your Iridium AccessPoint Connect hotspot. This is the main user interface for your Wi-Fi hotspot. It will be where you will configure your hotspot, start and stop the hotspot. It is also where you will see the status of the hotspot. The status can be found at the top near the Iridium globe.

Changing the Hotspot Name

You can customize the name of your Wi-Fi hotspot by changing the name of the hotspot. The Wi-Fi hotspot has a prefix which you cannot edit: IRDM-APC-. You may add characters after this to customize the name of your Wi-Fi hotspot. The entire name is limited to 32 characters. This is the name that you will give to others to connect to your Wi-Fi hotspot.

Setting a Password

Setting a password will allow you to control who can gain access to your Wi-Fi hotspot. In the Password field, enter 8 – 63 characters for your password. Once you enter in the password, it is saved automatically. This is the password that you will give to others when they want to connect to your Wi-Fi hotspot.

Internet Type

This is the internet connection and it is automatically configured to “Iridium AutoDial”. Iridium AccessPoint Connect starts and ends the Iridium connection through Direct Internet.

Configure “Iridium AutoDial” Settings

The Iridium AutoDial settings are pre-configured. The user does not need to make any changes. These settings are: dial at startup, hang up at shutdown, dial-on-demand, firewall, and redial timer. The default setting is to enable all four settings: dial at startup, hangup at shutdown, dial-on-demand and firewall enabled.

- Dial at Startup – Automatically brings up the Iridium connection when you select <Start Hotspot> and a new data call is placed.
- Hangup at Shutdown – Automatically brings down the Iridium connection when you select <Stop Hotspot>
- Dial on Demand – This feature controls the Iridium connection. It will bring down the Iridium connection after 3 minutes if there is no activity. No activity is defined as: no keystrokes, no mouse movement when no clients are connected. If there are clients connected, the Wi-Fi hotspot is never idle. The hotspot keeps the Iridium connection up if there is activity on the keyboard or mouse, or there are clients connected.
- Firewall – Firewall is enabled to prevent extraneous data from the Internet from coming through.
- Redial time – This is set to 30 seconds. If you are disconnected from the Iridium network, the software will attempt a redial to connect every 30 seconds.

Encryption Mode

This is the encryption type for your Wi-Fi hotspot. In most cases, you will select Access Point, WPA2-PSK. If you are using Windows Vista (32/64 bit) or Windows XP (32 bit), you must select Ad-Hoc, WPA2.

If you are using a Windows Vista or Windows XP laptop, you will not be able to connect your Wi-Fi enabled BlackBerry or Android to the Iridium Wi-Fi hotspot. BlackBerry and Android phones do not support ad-hoc connections.
